Quvenzhané Wallis: I Am Beyond It All.Q: Send JSON and InputStream parameters using spring mvc and android I'm developing an android application that requires to send both a JSON and an InputStream, the logic is that in the server side i receive the data from android as inputstream and from a JSON file, i use jackson library for deserializing the JSON into a JsonNode. My problem is that i'm not sure how to configure my web service call in Spring MVC to get the JSON and InputStream parameters. My client side is as follows: @RequestMapping(value = "/summon", method = RequestMethod.POST) public void summon(@RequestBody JsonNode node, HttpServletResponse response) { // TODO } And the JSON i receive from android is as follows: [{ "m": 1, "isAlive": true, "pos": { "x": 2647.9547, "y": 1023.6675 }, "pos2": { "x": 2622.2641, "y": 1024.6195 } }] My problem is how can i obtain the JSON data from my web service call? Thanks for the help! A: I would do it like this: @RequestMapping(value = "/sum
